“Mulch instantly gives your landscape a beautiful, finished appearance, but the advantages go far beyond simply elevating the look or value of your home or business”

Scotts.com

***Mulch:** is any organic or none organic material that is spread or laid over the surface of the soil as a covering. The purpose of mulching is to retain moisture in the soil, suppress weeds, keep the soil cool, and make the garden’s bed look more attractive. Organic mulches also help improve the soil’s fertility, as they decompose.*

Mulching Benefits:

- 1. Soil’s water loss prevention through out evaporation*
- 2. Weeds growth reduction*
- 3. Soil temperature control*
- 4. Soil erosion prevention*
- 5. Nutrients provider through out decomposition*
- 6. Decorative purposes*

Mulches can either be organic -- such as grass clippings, straw, bark chips, and similar materials -- or inorganic -- such as stones, brick chips, and plastic. Both organic and inorganic mulches have numerous benefits.

We are more than please to answer questions from any of our current and new customers about mulch care and maintenance. Please contact us anytime. Thank you.
